

Case Study

Siemens TeamCenter Integration

The Challenge

Our client, an international aerospace, space, and defense company, aimed to revolutionize their operations with the integration of Siemens Teamcenter. This massive strategic initiative required not just technological change but also fundamental shifts in business processes, collaboration, and employee training across global locations.

The Solution

KnowledgeForce Consulting synchronized our L&D design process with the client's agile project management approach. We introduced "content chunking," allowing training assets to be repurposed for multiple needs. The suite of learning solutions we designed included a diverse set of content assets—ranging from e-learning courses and how-to videos to go-live kits and standardized documentation.

The Results

Our L&D solutions offered a scalable, sustainable path for new tool adoption. By aligning with their change management team, we wove mindset messaging into our training. A 24/7 collaboration page provided real-time support, enabling instant access to essential resources.

Testimonial

"The innovative approach has been invaluable in steering one of our most transformative initiatives. The adaptable and multifaceted training resources not only meet our complex requirements but also encourage a shift in mindset. The 24/7 support platform has become an essential tool for our global workforce."

I hope you found this resource helpful and that it sparked ideas about how your Learning & Development could benefit from intentional, strategic focus and planning.

As you work to implement the strategy, please email me so we can brainstorm innovative approaches for your learning solutions.

I'd love to connect with you on LinkedIn. Visit our website for more resources like this one.
